## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election without traverse of Group II, claims 3-6 in the reply filed on 2/22/07 is acknowledged. Thus, claims 1-2 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention I, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 2/22/07. An Office action on the merits of claims 3-6 as follows.

### *Specification*

2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

Art Unit: 3729

- (I) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

### ***Claim Objections***

- a) Method pursuant to claim 3" (claims 4-6, line 1) should be changed to:-- The method of claim 3--.
- b) "the function layers(46, 49)"(claim 3, line 3) should be --the function layers (46, 48)--.
- c) what being referring as "their" (claim 3, line 13) ?
- d) "and/or " (claim 5, line 2 , claim 6, line 4 ) should be deleted.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Makoto (JP 2094381) in view of Seigemund (5,626,803).

Makoto discloses a method for producing multi-layer carbon brushes comprising steps: forming a plate brush by placing layers, which correspond to the multi-layer carbon brush to be produced, of carbon material or carbon-containing material as filler in powder form and electrically insulating material in powder form or in the form of a film into a mold, pressing of the layers present in the mold to form the plate brush, heat treatment of the plate brush 12 (see Figs. 1-3, and the discussion under heading "constitution"). Makoto does not teach the final step where the plate brush being dividing into sizes corresponding to the multi-layer carbon brushes or their final contours. Regarding to this, Seigemund discloses the above where the plate brush being dividing into sizes corresponding to the multi-layer carbon brushes or their final contours (see the discussion at col. 13, lines 39-51). Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention was made to employ the Seigemund's teaching as described above onto the method invention of Makoto in order to form a desired brushes including size shape and configuration which including the above, etc.

As applied to claims 4-6, these claims directed to a number of particular materials it would have been an obvious matter of design choice to choose any materials from a host or group of available materials since applicant has not disclosed that the above materials are critical, patentably distinguishing features and it appears

that the invention would perform equally well with the type of materials as taught by either of the prior art references.

### **Conclusion**

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
